

Fall-1977

27 September 1977
7:45 p.m.

This is to report that there are Sabine's Gulls on the refuge. I called the refuge today and who ever answered didn't know about them. They have been seen the past 2 days - Sun & Mon. - also.

I hiked down the left side of the visitor's loop past station one, the mud flats on the left and over the bridge in the road. To the left I saw 2 males and 2 immatures Sabine's Gulls. It was a 15 min. hike out.

I went back to the
flat from left
at 6:55 p.m.

I am an officer of Bridgetown Audubon Society

Sincerely,

Dr. Jan Young
Ornithologist
